

Fire alarm Elvatunet

All of the Saman student houses are installed with a fire alarm system to alert the tenants in case of fire!

What to do if the alarm is activated:

1. Close all windows and doors.
2. Go down to the alarm panel, you'll find it by the front door on the 1st floor.
3. The first to arrive reads the panel; here you'll find information about where the alarm was activated.
4. Go to the place where the alarm was activated to check if there is a fire.

In case of fire:

5. Evacuate the building, extinguish if possible.
6. CALL THE FIREDEPARTMENT 110, let them know the location of the fire.

False alarm:

7. Go down to the alarm panel, put in the key and turn it. Hold in the red button (**Avstill**) until the alarm stops.
8. Open windows and doors to air out the area where the alarm was activated, but DO NOT AIR IT OUT INTO THE HALLWAY!
9. When the area is aired out, hold in the green button (**Tilbakestill**) until the light stops blinking. Take out the key.

Sabotage of the fire alarm system, covering or removal of detectors and alarms is a violation of your tenancy agreement and will lead to fees and possible eviction!
