

Fire alarm Stedjeåsen

All of the Saman student houses have a fire alarm system installed to alert the tenants in case of fire!

What to do when the alarm is activated:

1. Close all windows and doors.
2. Go to the alarm panel, you'll find it in the mailroom/laundry room in house nr.21.
3. The first to arrive reads the panel; here you'll find information on where the alarm was activated.
4. Go to the area where the alarm was activated to check if there is a fire.

In case of fire:

5. Evacuate the building, extinguish if possible.
6. CALL THE FIREDEPARTMENT 110, let them know the location of the fire.
7. Next to the alarm panel in house nr.21 there is a manual fire alarm (the red box in the picture). This activates ALL the fire alarms in the student houses in Stedjeåsen. Activate it by pressing on the white area!

False alarm:

5. Go to the alarm panel, put in the key and turn it. Hold in the red button (**Avstill**) until the alarm stops. You can also use the box in the hallway in every house, as shown in the picture.
6. Open windows and doors to air out the area where the alarm was activated, but **DO NOT AIR OUT INTO THE HALLWAY!**
7. When the area is aired out, hold in the green button (**Tilbakestill**) on the alarm panel until the light stops blinking or on the box in the hallway until you hear a 'click'.

Sabotage of the fire alarm system, covering or removal of detectors and alarms is a violation of your tenancy agreement and will lead to fees and possible eviction!
