

Fire alarm Studentheimen

All of the Saman student housing have a fire alarm system installed to alert the tenants in case of fire!

In Studentheimen ALL fire alarms are sent directly to the emergency central in Florø, so the fire department will be in place as soon as possible.

What to do if the alarm is activated:

1. Close all windows and doors..
2. Go to the alarm panel, you'll find it in the middle stairway on the 1st floor.
3. The first to arrive reads the panel; here you'll find information about where the alarm was activated.
4. Go to the location where the alarm was activated to check if there is a fire.

Alarm panel on the 1st floor

In case of fire:

5. Evacuate the building, extinguish if possible.
6. CALL THE FIREDEPARTMENT 110, let them know the location of the fire.

False alarm:

5. CALL THE FIREDEPARTMENT 110, let them know it is a false alarm! If this is not done, the tenant responsible for the false alarm will be billed for the emergency response!
6. Go down to the alarm panel, put in the key and turn it. Hold in the red button (**Avstill**) until the alarm stops
7. Open windows and doors to air out the area where the alarm was activated, but DO NOT AIR IT OUT INTO THE HALLWAY!
8. When the area is properly aired out, hold in the green button (**Tilbakestill**) until the light stops blinking. Take out the key.

Sabotage of the fire alarm system, covering or removal of detectors and alarms is a violation of your tenancy agreement and will lead to fees and possible eviction!
